

BIS Certification for Construction Materials · Cement, Steel and Concrete (S

1. SCOPE OF THIS GUIDE

This guide summarises how Indian Standards apply to common construction materials: cement, reinforcing steel, structural steel and concrete practice. It is a training aid, not an official BIS publication.

2. CEMENT STANDARDS AND GRADES

Ordinary Portland Cement is specified by IS 269 (33 grade), IS 8112 (43 grade) and IS 12269 (53 grade). Portland Pozzolana Cement is covered by IS 1489. Tests are per IS 4031 (physical) and IS 4032 (chemical). Cement has long been under mandatory BIS certification: bags carry the ISI mark, licence number, grade and week-year of packing. Use fresh cement; strength reduces with long storage.

3. REINFORCEMENT AND STRUCTURAL STEEL

High strength deformed reinforcement bars are covered by IS 1786; mild steel bars by IS 432. Structural steel sections are covered by IS 2062 and related product specifications. TMT bars for buildings are commonly certified against IS 1786 and carry the ISI mark with grade marking (for example Fe 500 or Fe 550D). Check the grade marking on every bar and the manufacturer's test certificate for the lot.

4. CONCRETE AND SITE QUALITY CHECKS

Concrete design and construction practice is covered by IS 456 (Plain and Reinforced Concrete - Code of Practice) and concrete admixtures by IS 9103. Site checks include slump testing of fresh concrete, cube testing for compressive strength at 7 and 28 days, and curing practice per the code. Materials arriving on site should match the specified Indian Standard and carry the required marks.

5. BUYER AND BUILDER CHECKLIST

For cement: verify the ISI mark, licence number, grade and packing week. For steel: verify the grade embossing, manufacturer's test certificate and ISI mark where certification applies. For ready-mix concrete: ask for the mix design, the IS 456 compliance statement and cube test reports. Mandatory certification coverage changes through Quality Control Orders; verify the current list on the official BIS source before procurement.
