

About the Bureau of Indian Standards · Overview for Consumers and Industry

WHAT IS BIS

The Bureau of Indian Standards (BIS) is the National Standards Body of India, established under the BIS Act 2016. BIS formulates Indian Standards, operates certification schemes including the product certification (ISI mark) scheme, the Registration Scheme for electronics, the hallmarking scheme for gold and silver jewellery, and provides testing services through its laboratories. BIS also handles consumer grievances related to misuse of the Standard Mark and quality of certified products.

INDIAN STANDARDS AND MARKS

An Indian Standard (IS) is a technical standard published by BIS prescribing requirements a product must meet. The ISI mark is the certification mark used under product certification. The CRS mark indicates registration under the mandatory registration scheme for electronics and IT goods. The BIS hallmark is the mark used on hallmarked gold and silver jewellery with the HUID code. The Hallmark Unique Identification (HUID) is a six-character alphanumeric code laser-marked on each hallmarked item, traceable through the BIS Care application.

CONSUMER SERVICES AND COMPLAINTS

Consumers can check the genuineness of a licence, registration or HUID through the BIS Care mobile application or the BIS website. Complaints about misuse of the ISI mark or quality issues in certified products can be filed through the BIS Care app, the BIS website or the nearest BIS branch office. BIS operates Standards Clubs in educational institutions and conducts training and awareness programmes. The official BIS portal is the authoritative source for current rules, lists and fee schedules.

MSME AND STARTUP RELEVANCE

BIS operates a Simplified Procedure for micro and small enterprises, granting a provisional licence based on self-test reports with independent verification, followed by a factory audit. MSMEs and startups preparing for certification should set up the quality control and test facilities required by the applicable Indian Standard and prepare documentation such as the process flow chart, machinery list and calibration records. Verify current facilitation measures on the official BIS portal.
